

# RSS Block

## Studio material

### Overview

RSS Block allows you to automatically load RSS news channels.

Use an RSS Block to automatically load and display favorite news and information from **RSS** (Really Simple Syndication) news feeds (aka channels). Retrieve the latest headlines and articles (or even audio files, video or photographs) and display them on your site. Subscribe to channels and receive announcements of published content in a free and easy way.

## Configuring basic RSS Block settings

### To customize RSS block:

1. Place an RSS element onto a page.

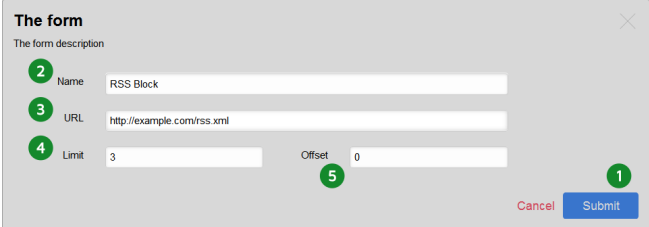

By default, the RSS Block is empty.

2. Select the RSS element and click the  configuration icon from its toolbar.

3. Specify the RSS options.

4. Apply changes by clicking **Submit**.

RSS Block configuration window

## Available options

Option	Description
 Name	Use it to define the RSS Block name.

 <b>URL</b>	Enter a URL of a website which contains an RSS feed. The RSS Block will pull content from this feed.
 <b>Limit</b>	Enter the maximum number of recent items that will be shown from the RSS feed.
 <b>Offset</b> <optional>	Set how many of the latest content items will not be displayed. <u>Example:</u> If offset is set to two, then the first two items from the RSS Feed source will not be shown. The block will then display the feed content from #3 and older only.
